Assignment - 3

19K41A05B1

→ Given, $f(x,y) = 3x^2 + 5e^{-y} + 10$

Iteration ①

① Initialize : $x=1$, $y=1$, $\eta = 0.01$

② Gradient calculation :

$$\frac{\partial f(x,y)}{\partial x} = 6x = 6(1) = 6$$

$$\frac{\partial f(x,y)}{\partial y} = -5e^{-y} = -5(e^{-1}) = -1.8$$

③ Step length :

$$\Delta x = -\eta\left(\frac{\partial f(x,y)}{\partial x}\right) = -(0.1)(6) = -0.6$$

$$\Delta y = -\eta\left(\frac{\partial f(x,y)}{\partial y}\right) = -(0.1)(-1.8) = 0.18$$

④ update x, y values.

$$x = x + \Delta x = 1 - 0.6 = 0.4$$

$$y = y + \Delta y = 1 + 0.18 = 1.18$$

Iteration ②

① Gradient calculation :

$$\frac{\partial f(x,y)}{\partial x} = 6x = 6(0.4) = 2.4$$

$$\frac{\partial f(x,y)}{\partial y} = -5e^{-y} = -5(e^{-0.18}) = -4.17$$
